The Eurasian Journal of Medicine
Formerly Atatürk Üniversitesi Tıp Dergisi

The Eurasian Journal of Medicine is a peer reviewed medical Journal abstracted/indexed by SCOPUS, Index Copernicus, EBSCO, Gale/Cengage, CINAHL, DOAJ, ProQuest, ULAKBIM/Turkish Medical Index, Turkiye Citation Index and it is aimed to be indexed/abstracted by PubMed/MEDLINE and SCI-Expanded in near future.

Citation Abbreviation: Eurasian J Med
Published three times a year
Open Access: www.eajm.org

Vol.: 44 Issue: 3 December 2012

www.eajm.org

ISSN 1308-8734
E-ISSN 1308-8742
Aims and Scope

The Eurasian Journal of Medicine (EAJM), formerly Atatürk Üniversitesi Tıp Dergisi (the last issue published under this name is 2006, volume 38/2), is the official journal of Atatürk University School of Medicine. The EAJM has been the regular publication of the School of Medicine since 1968. The journal is a peer-reviewed, nonprofit scientific periodical. Three English-language issues have been published each year (in April, August and December) since 2008.

The Eurasian Journal of Medicine is indexed in Scopus, EM CARE, CINAHL, Gale/Cengage, EBSCO, DOAJ, ProQuest, ULAKBIM/Turkish Medical Index, Turkiye Citation Index, Index Copernicus and Chemical Abstracts databases.

The aim of the EAJM is to publish original research papers of the highest scientific and clinical value in all medical fields. The EAJM also includes reviews, case reports, editorial short notes, images of interest and letters to the editor that are related to recently published articles.

The journal’s target audience includes researchers, physicians and healthcare professionals who are interested or working in in all medical disciplines.

The EAJM adheres to the highest ethical and editorial standards. The editors of the journal endorse the Editorial Policy Statements Approved by the Council of Science Editors Board of Directors (www.councilscienceeditors.org/services/draft_approved.cfm). The journal is in compliance with the Uniform Requirements for Manuscripts Submitted to Biomedical Journals, which is published by the International Committee of Medical Journal Editors (updated October 2008, www.icmje.org).

Subscription Information & Request Permissions

The EAJM is sent free of charge to authors published in the issue, medical faculties, libraries and selected academicians in Turkey. Currently, all contents published from 2000 through the last issue can be accessed in full-text form free of charge through the journal’s website (www.eajm.org). All contents from 1968 to 2000 is available on the website.

Requests for permissions to reproduce material should be sent to the editorial office.

Address: Atatürk Üniversitesi Tıp Fakültesi Dekanlığı, EAJM Dergisi Sekreterliği, 25240, Erzurum, Turkey

Fax: +90 442 236 09 68
E-mail: eajm@atauni.edu.tr

Instructions for Authors: Instructions for authors are published in the journal and are available online at www.eajm.org.

Material Disclaimer

The author(s) is (are) responsible for articles published in the EAJM. The editor, editorial board and publisher do not accept any responsibility for the articles.

The journal is printed on acid-free paper.
Instructions for Authors

The Eurasian Journal of Medicine (EJM) publishes clinical and experimental work that is related to the field of medicine. In addition to original material, the EJM prints reviews, case studies, images of interest and letters to the editor. An approval of research protocols by an ethics committee in accordance with the international agreements (Helsinki Declaration of 1964, revised 2008 - available at http://www.wma.net/en/30publications/10policies/b3/ and "Guide for the care and use of laboratory animals - http://www.nap.edu/catalog.php?record_id=12910) is required for experimental, clinical and drug studies. The signed statement of the scientific contributions and responsibilities of all authors and a statement on the absence of conflicts of interest are required. The authors should acknowledge and provide information on grants, contracts or other financial support of the study that were provided by any foundations, institutions or firms.

MANUSCRIPT TYPES

1. Original articles
2. Case reports
3. Images of interest
4. Reviews
5. Letters to the editor

Table 1 summarizes our publication priorities. The editorial preferences in Table 1 might encourage authors who are uncertain of the significance of their reports.

Table 1. Publishing priorities in the EJM

<table>
<thead>
<tr>
<th>Manuscript Topics</th>
<th>Acceptance priority</th>
<th>Content</th>
<th>Structure and submission track</th>
</tr>
</thead>
<tbody>
<tr>
<td>Original research articles</td>
<td>absolute preference</td>
<td>completed and high-quality work</td>
<td>clear hypothesis; strong, databased arguments</td>
</tr>
<tr>
<td>Reviews</td>
<td>solicited only</td>
<td>on a relevant subject</td>
<td>significant own previous publications</td>
</tr>
<tr>
<td>Case reports*</td>
<td>low</td>
<td>completeness and originality</td>
<td>clear-cut relevance to the field</td>

</table>

*Can contain an unexpected association between diseases or symptoms, an unexpected event in the course of observing or treating a patient; findings that elucidate the possible pathogenesis of a disease or an adverse effect, unique or rare features of a disease, unique therapeutic approaches or a positional or quantitative variation of the anatomical structures. To conduct quality research and prepare well-written reports, you can use EQUATOR (Enhancing the QUAlity and Transparency Of health Research) Network Resources (http://www.equator-network.org/) and the CONSORT (Consolidated Standards of Reporting Trials) statement in your studies*. Please refer to the COPE statements for our evaluation of manuscripts by means of publication ethics (http://publicationethics.org/)

ELECTRONIC MANUSCRIPT PREPARATION

The preparation of manuscripts should conform to the updated Uniform Requirements for Manuscripts Submitted to Biomedical Journals (http://www.icmje.org)2. All manuscripts must be submitted electronically. The manuscript file that you submit must be saved as a .doc (MS Word document). Please number the pages consecutively, in the lower right hand corner and beginning with the title page. Use the left justification feature (ragged right margins), letter quality printing, and do not use line-numbering. The paper should be arranged in this order (all in one document): title page, abstract with keywords, text, acknowledgments, references, tables, and figure legends.

Original Articles

Original articles should follow the basic structure of an abstract, introduction, Materials and Methods, results, discussion, references, and tables and figures (as appropriate). Submissions should not typically exceed 4000 words for the abstract and 4000 words for the content; they should include no more than 35 references. Figures and/or tables should be limited to a total of ten (Table 2).

Case Reports

Case reports should not exceed 2000 words with two tables or illustrations, a short unstructured abstract, and ten references. Case reports should follow the basic structure of an unstructured abstract, introduction, case report, discussion, references, and tables and figures (as appropriate). We do ask that authors indicate that they have obtained patient consent.

Letters to the Editor

We welcome letters in response to articles published in the EJM. These submissions must reach us before the next issue is published. The letters should be a maximum of 500 words, with one figure or table and no more than five references. Letters to the editor should include a title page and must only concern articles that were recently published in the EJM. A response to the letter will be requested from the author of the article in question; if there is a response, the letter and the response will be published together.
Our image section consists of a case report of 250 words, a few instructional points, a maximum of two figures, and two references. We do ask that authors indicate that they have obtained patient consent if applicable. Image submissions should also include a title page, keywords and references. No additional legend subtitles for figures are necessary. Reviews Although they are usually commissioned, we occasionally accept unsolicited review articles. MANUSCRIPT FORMAT The manuscript format must be presented in the following order: 1. Title page 2. Abstract a. Objective b. Materials and Methods c. Results d. Conclusion e. Keywords (3 to 6) 3. Main text (tables should be inserted where cited in the text; images must be uploaded as separate files) a. Introduction b. Materials and Methods c. Results d. Discussion 4. Acknowledgements, Competing interests, Funding 5. References DO NOT write a separate “Conclusion” heading (You may, however, begin where you believe your conclusion section to begin with “In conclusion...”). Title page Please provide a concise and informative title of fewer than 150 characters. Include a list of all of the contributing authors and their affiliations. Supply full correspondence details for the corresponding author, including phone and/or fax number and e-mail address. Provide a short title for the manuscript (limited to 75 characters). The title page should include the following: 1. The full name and the highest relevant academic degree(s) of each author (limit of 2 degrees); 2. The names of the departments and institutions where the work was completed by each individual author (use symbols to link the authors to their affiliations) and the current affiliations if these have changed; 3. Disclaimers, if any; 4. Any sources of support in the form of grants, equipment or drugs; 5. The name of one author who is designated to be the corresponding author, with a complete postal address, telephone number, fax number, and e-mail address (this is the address to whom reprint requests will be addressed unless the authors state that reprints will not be available); and 6. A short title (9 or fewer words), placed at the bottom of the page and identified as a footnote. Abstract Please include an abstract of 400 or fewer words. The abstract should be easily understood without reference to the text (see Ann Intern Med 1987; 106: 598-604). The abstract must have four separate, structured paragraphs (Objective, Materials and Methods, Results and Conclusion) that correspond to the research question, the material or patients, the methods, the results, and the answer to the research question. If necessary, one or two sentences with background information can be included before the research question. The question and the answer should be the same as those provided in the text. Include only a few important values and avoid using abbreviations or reporting statistics. State the purposes of the study, the basic procedures (study subjects or experimental animals; observational and analytic methods), the main findings (specific data and its statistical significance), and the conclusions. Emphasize the new and important aspects of the work. Avoid abbreviations other than standard units of measurement. Information in the abstract must match the information in the text and should not contain any information that is not presented in the text. Keywords Please provide a list of 3 to 6 keywords. The keywords should be listed alphabetically and in full without abbreviations. Keywords are best expressed as MeSH (Medical Subjects Headings) terms, which is the controlled vocabulary used by PubMed. The MeSH browser available online (http://www.nlm.nih.gov/mesh/MBrowser.html) provides a guide for how to select keywords. Text (Content and Style) The texts of observational and experimental articles generally include these sections: Introduction, Patients (or Material) and Methods, Results, and Discussion. Other articles such as case reports and reviews will require other formats; authors should consult representative articles in the Journal. Introduction State the question that you asked (or the hypothesis to be tested) and the considerations leading to the formulation of the question. Provide only pertinent references. Case reports should also include an introduction. Materials and Methods 1. Protection of Human and Animal Subjects Study • Clearly describe how the subjects or experimental animals were identified, including the control subjects (if used). For animals, see Laboratory Animals, 1985; 19: 106-108.
• Clearly state the eligibility criteria for cases and controls in observational studies or for subjects in clinical trials.
• All work involving human subjects is expected to have received approval from the local ethics committees and the regulatory authorities (when appropriate; for example, for studies involving drug trials).
• Animal experimentation must be performed according to the Helsinki Convention for the use and care of animals.
• The editors reserve the right to refuse work that does not conform to acceptable ethical criteria.

Methods
• Describe the methods and apparatus in sufficient detail to allow other researchers to evaluate or reproduce the tests/experiments.
• If the methods have previously been published, provide only a reference or a reference and a brief description.
• Identify any drugs and chemicals, including the generic name, the dosage and the route of administration. State the form in which the drug was used (salt or base), the amount given in relation to body weight, and the route of administration; if injected, state the volume and the rate of injection. State the frequency and the time of additional doses.
• Please provide the manufacturer’s name and address for equipment, drugs and chemicals. This information should not be presented in a separate section. Credit the suppliers of drugs, equipment, and other materials described at length in the paper in parentheses at the first mention, giving the specific product name and the model number (if applicable), the company name, and the company location (city, state, and country).

Analysis
• Clearly state and define the main outcome measure(s).
• Briefly state the statistical methods used during the analysis if they are standard. New methods should be described with justification.

Results
Keep the Results section brief. Describe the baseline characteristics or the condition of the patients or animals. Focus on the important results, i.e., the results that help to address the research question. Present the majority of the data in figures or tables rather than in the text. Use the text to emphasize or summarize the most important observations. Present both the positive and the relevant negative results.

Discussion
At the beginning of the Discussion, summarize the main results and show how they address the research question. Make sure that the conclusions are consistent with the results and are pertinent to the research question. Describe the limitations of the study and/or analysis, and discuss the possible implications of your conclusions. Emphasize the new and important aspects of the study. Try to explain any contradictory or unexpected results or discrepancies using previous findings.

Acknowledgements
All acknowledgements should be grouped into one paragraph and placed after the Discussion. Only acknowledge those who have made substantial contributions to the study.

References
Number the references consecutively in the order in which they first appear in the text. Use full size Arabic numerals in square brackets. List all authors when there are six or fewer. When there are more than six authors, list only the first three and then add et al. The references should conform to the style used in Index Medicus (Vancouver Style), as shown in the following examples:

1. Standard Journal Article
2. Book by One or More Authors (including specific page numbers)

3. Chapter in a Book

4. Websites should be listed with the references and not in the text. Websites should only be used when an original citation is unavailable. Citations should be listed as follows:
   - WHO. Severe Acute Respiratory Syndrome (SARS).
     www.who.int/csr/sars/en/index.html Date last updated: June 1 2004. Date last accessed: June 1 2004. Work that has not yet been accepted for publication and personal communications should not appear in the reference list.

5. Abstract in a Journal Supplement

Tables
   - Tables should be created and inserted into the text document using the "Table" and the "Insert Table" functions in your word processing package. DO NOT supply tables in a separate file. Tables should be numbered consecutively with Arabic numerals.

   Limit the decimals to a sensible number. Large tables should be avoided due to space restrictions; otherwise, they could be split. Please provide a clear footnote for all tables, making sure that ALL abbreviations and symbols are defined. Explain all nonstandard abbreviations in the footnotes. Identify the statistical measures of variations, such as standard deviation or standard error of the mean. Do not submit tables that merely repeat information in the text. Provide permissions to use data from other published or unpublished sources.

   The EAJM requires that all digital artwork be prepared according to professional standards. Digital files must meet the Journal requirements to be accepted for publication. Figures that do not meet the guidelines will be rejected. Please refer to the instructions below when preparing images for publication.

   A. Image Preparation Checklist. To verify that you have fulfilled the requirements for electronic image preparation, use the following checklist. Each category is expanded below (Table 3).
     - Charts or illustrations created in Microsoft Office (Word, PowerPoint, Excel) are submitted in native format and do not include embedded images.
     - Charts created in SPSS, SigmaPlot or ChemDraw are submitted as EPS images.
     - All graphics are sized to 100% of their print dimensions so that no scaling is necessary (3.2" wide for 1-column figures and 6.4" wide for 2-column figures).
     - Images have been scanned according to our scanning guidelines.
     - Files are named using our recommended naming conventions.

B. Color. When preparing digital images for publication, it is important to scan and save the electronic files in the correct color space.

   1. Photographic images. Images such as photographs, angiograms, echocardiograms, etc., should be scanned and saved in RGB color mode, even if the images will be printed in grayscale. (The journal compositors will convert these images to their final grayscale color modes.) Note: Printing in color is expensive and is not always necessary. Please inform the Journal editors if an image requires color for clarity.

   2. Line art. Black-and-white images, including line drawings, charts, graphs, and EEG and ECG recordings, should be scanned and saved in grayscale mode (not black-and-white or color). (For charts created in SPSS, refer to Section C.2 on creating EPS file formats for charts and graphs created in Microsoft Office, refer to Section C.3.)

   3. Avoid ICC Profiles. Images should not contain any ICC profiles.

C. File Format.
   - Submit only TIFF or EPS for electronic images. See instructions for submitting artwork that was created in Microsoft Office programs (Word, PowerPoint, Excel).

   1. TIFF (Tagged Image File Format). TIFF is recommended for photographic images. When preparing TIFF images, be sure to refer to our scanning guidelines for the proper resolution. Note: The Journal accepts TIFF images that are saved with LZW compression; choosing this option will result in smaller files. In most software programs, TIFF is made by choosing File/Save as... or Export/TIFF or TIF. For more information, consult the Help menu of your software.

   2. EPS (Encapsulated PostScript). EPS have all the advantages of an electronic file format; however, EPS are not supported by all word processing programs. If you prefer to use EPS, choose this option will result in smaller files. In most software programs, a EPS is made by choosing File/Export to. The EPS files are then transferred to the Journal's electronic publishing system.
2. EPS (Encapsulated Postscript). EPS is recommended for line art, charts, and illustrations that are created using professional drawing programs such as Adobe Illustrator, SPSS, ChemDraw, CorelDraw, SigmaPlot, etc. When submitting EPS files for publication, be sure to use the following guidelines:

- Convert text to outlines or include/embed fonts. Use only Journal-approved fonts.
- Flatten any layers.
- Use line weights greater than 0.5 points.
- Include an 8-bit preview/header at a resolution of 72 dpi.
- Save color images in RGB color mode.

In most drawing programs, an EPS file is made by choosing File/Save as … or Export/EPS. For more information, consult the Help menu of your software.

3. Microsoft Office (Word, Excel, PowerPoint). Charts and illustrations created in any Microsoft Office programs are accepted. Do not submit Microsoft Office files that contain embedded images. When creating charts and illustrations, use the following guidelines:

- Work in black and white, not color.
- Do not use patterns for fill color; use black, white, and shades of gray.
- Avoid 3-dimensional charts.
- Use only Journal-approved fonts.
- Use line weights greater than 0.5 points.
- Submit the grouped image so that the Journal compositors can access the data-sheet.

4. AVOID THE FOLLOWING:

- Submitting graphics that are downloaded or saved from Web pages. The resolution will be too low, regardless of how the image looks on screen.
- Submitting GIF files. GIF files are never appropriate for publication. Scanning pre-printed photographs (already published halftones). The printing process introduces distortion into the photograph that will transfer to the scan.
- Generating TIFFs within the Microsoft Office Document Scanning Program. This proprietary program changes the image formatting in such a way that the image cannot be opened in our image evaluation program.

D. Resolution and Scanning

1. Images must be scanned at the proper resolution to ensure print quality. Use the following guidelines to select the correct scanning resolution. Images that are scanned at lower resolutions will be rejected.

- Photographic images without text or arrows: 300 dpi/ppi
- Photographic images with text or arrows: 600 dpi/ppi
- Black-and-white line art: 1200 dpi/ppi

a. Scanning photographic images without text or arrows

- Scan in RGB mode.
- Scan at 300 dpi/ppi.
- Select a target width of 7.5 cm for 1-column figures and 15.5 cm for 2-column figures.
- Crop images tightly; do not scan the margins.
- Use the EAJM naming convention; save as a TIFF and apply LZW compression.

b. Scanning photographic images with text or arrows

- Scan in RGB mode.
- Scan at 600 dpi/ppi (even if text or labels will be added after the image is scanned).
- Select a target width of 7.5 cm for 1-column figures or 15.5 cm for 2-column figures.
- Crop images tightly; do not scan the margins.
- If adding labels, use an approved font. If the labels are pixilated, you may be asked for an unlabeled version.
- Use the EAJM naming convention; save as a TIFF and apply LZW compression.

c. Scanning black-and-white line art

- Scan in grayscale mode.
- Scan at 1200 dpi/ppi.
- Select a target width of 7.5 cm for 1-column figures and 15.5 cm for 2-column figures.
• Images should be tightly cropped; do not scan the margins.
• If adding labels, use an approved font. If the labels are pixelated, you may be asked for an unlabeled version.
• Use the EAJM naming convention; save as a TIFF and apply LZW compression.

2. Scanning originals that are smaller than the target width
• Choose the correct color space for the photographic image or line art.
• Determine the correct resolution. If an image has a width smaller than the target width, it is necessary to compensate by increasing the scanning resolution. To increase the resolution, divide the actual width by the target width (either 7.5 cm or 15.5 cm). Multiply the answer by the target dpi and round up to the nearest hundred. The result will determine the scanning dpi. Use the following example: If an image is 2.4" wide and needs to be 300 dpi/ppi at 3" wide, then 3 divided by 2.4 = 1.25. 1.25 times 300 = 375, and round up to 400. Thus, if the 2.4" image is scanned at 400 dpi/ppi, the Journal can properly convert the image to be 3" wide at 300 dpi.
• Use the EAJM naming convention and save.

E. Naming Files
1. Naming convention. Please use the following naming convention for electronic images:
   Author last name + figure number.file format
   For example: Okur1.eps or Okur1A.tif
2. Revising images. Any time that you revise an image and resubmit it to the Journal, you need to add a version number to ensure that the image will be re-evaluated.
   For example: Smith1.eps would be saved the next time as Smith1_v2.eps
   Note: Always allow the software program to add the file format extension. Files that do not contain an extension will be rejected. To change a file format extension, you must use the Rename command.

F. Approved Fonts. Please use one of the following fonts for text in labels, graphs, and charts:
• Adobe Garamond
• Arial
• Helvetica
• Symbol
• Times New Roman
• Univers LT

G. Labels
1. Do not place figure labels (A, B, C, etc.) on the digital images; include the letter in the figure file name (for example, Smith2B.tif).

2. If images are part of an A, B, C series, scan and submit each image separately.

H. How to Submit Images. To submit digital artwork, refer to the information in the Manuscript Submission section.

Revised Manuscript
Revised manuscripts must be submitted with a revised cover letter that contains each review comment followed by the authors’ response. When submitting revised manuscripts, we strongly encourage authors to use the “track changes” feature in Microsoft Word or similar software. Otherwise, corrections should be highlighted in red text.

Manuscript Submission
Manuscripts can be submitted electronically using the EAJM online submission system (see the Journal’s Web site at www.eajm.org). Authors who mail manuscripts or images to the Journal will be asked to register at the EAJM online submission system and to submit electronic files. Copyright transfer forms and permissions can be mailed to EAJM, Atatürk Üniversitesi Tıp Fakultesi EAJM office 25240 Erzurum, Turkey. Also a scanned copy should be uploaded to the manuscript submission system.

Review, Processing, and Reprints
Manuscripts are generally reviewed by two or more expert consultants. The initial review process takes 2 to 6 weeks; the review of revisions requires additional time. Written comments, when available, are returned when the manuscripts are returned.

A. Editing. All manuscripts accepted for publication are edited for clarity in accordance with the EAJM style and returned to the author for approval. The authors are responsible for all statements that are made in their work, including changes that are made by the editors and authorized by the corresponding author.

B. Ownership. All accepted manuscripts become permanent property of the EAJM and can not be published elsewhere without written permission from the chief editor.

C. Reprints. Reprint order forms are sent to the author immediately after the publication of an article. The EAJM neither orders reprints nor has reprints available.

The author(s) MUST sign, scan and e-mail the copyright transfer form within three days AFTER their manuscript’s acceptance for publication (info@eajm.org). Otherwise, online or print publication will not be made.

Thank you for your cooperation.

References
COPYRIGHT TRANSFER FORM

This agreement should be signed by all the authors in order for the manuscript to be published. Please fill in, sign and return this form by fax (+90-442-2360988) or by post to the Publication Office, Atatürk Üniversitesi, Tıp Fakültesi Dekanlığı, Dergi Sekreterliği, 25240-Erzurum, Turkey.

Article Title: ………………………………………………………………………………………………………………………………………………………...
Manuscript Number: EAJM………………………………………………………………………………………………………………………………………………

By signing this form the author(s) certify that:
1. It is their original work, has not been published before and being considered for publication elsewhere; that they have obtained permission for an acknowledged the source of any excerpts from other copyright works; that to the best of their knowledge their paper contains no statements which are libelous, unlawful or in any way actionable; that it does not include any duplication material;
2. The author(s) accept that The Eurasian Journal of Medicine does not hold any responsibility for the content of this article, including context, conclusion, information, results, and interpretation;
3. The article does not infringe any personal or property right of others;
4. The authors have made substantive and specific intellectual contributions to this article and assume full responsibility for its content;
5. This agreement has been signed by all the authors who contributed to the article;
6. The editor of The Eurasian Journal of Medicine has been or will be informed of proprietary or commercial interest of conflict of interest the authors may have that related directly or indirectly to the subject of this article. This information must be noted in the cover letter submitted with the article;
7. The scientific content of the images has not been altered, and that disclosure has been made regarding computer enhancement or other electronic manipulation of the images;
8. The copyright that the authors assign to the The Eurasian Journal of Medicine encompasses all rights to exploit the article in any manner throughout the world. These rights include, but are not limited to, all print reproduction and publication rights and electronic publication rights, such as CD-ROM and online publication, as well as dissemination by any technology now known or later devised;
9. The author(s) retain all patent and other proprietary rights to the article, with exception of the copyright. If an author wishes to reproduce the article in any medium for distribution purposes, the author must obtain permission from the The Eurasian Journal of Medicine and, if permission is granted, the author must credit the original source of publication when the article is reproduced.

Disclosure:
☐ I, or a member of my immediate family, do not now have and have not had within the past 12 months a financial interest or other relationship.

Please list the manufacturers and/or service providers with whom you have a financial relationship, and describe the nature of your relationship. Please be specific.
